## As The Editor Sees It

SO much has happened in the Construction Industry in the last two years; events have followed each other so fast and close, that it is very difficult to view the situation as a whole and realize the full import of each phase of the situation. We all know that from a forbidden industry during the war, construction has risen to a foremost place among the industries of the country in the reconstruction period. That this sudden transition must entail much confusion and many difficulties is easy to see. "Economics of the Construction Industry," a book just issued by the United States Department of Labor, reviews as a whole the period through which we have just passed and contains a compilation of the surveys and analyses made during the first half of 1919 by the Division of Public Works and Construction Developments of the Department under the personal direction of F. T. Miller.

The subjects treated in this publication which are most interesting to the building trades are:

"The Decrease in the Purchasing Power of Money."

"Cost and Supply of Construction Materials."

"Labor and Wages in the Construction Industry."

"Sources and Supply of Capital for the Construction Industry."

"Rents and Land Values."

"Deferred Construction."

"Bibliography." (Presenting a very valuable list of references and authorities.)

"The function of the Information and Education Service," according to Mr. Miller, "had been to facilitate by means of educational publicity the transfer of labor and industry from peace to war production. When the armistice was signed and hostilities ceased, it clearly became the duty of the Information and Education Service to employ its means of publicity toward a restoration of labor and industry to a peace footing."

"Of the larger industries of the country the one which had been most severely curtailed was the construction industry, embracing public work and private building. Its prompt return to a condition of activity was a matter of public interest (1) in order to ameliorate the shortage of housing and of other private buildings, which was causing high rents and affecting the cost of living and of production; (2) in order to supply the deficiency in schools, hospitals, roads, water supplies, local transit and other public and semi-public utilities, the construction of which, and in many cases, the repair of which had been wholly or partly discontinued during the war; (3) in order to furnish employment to demobilized soldiers and industrial workers during the period of readjustment of the manufacturing industries."

In summarizing the work and conclusions the Department says:

"The instructions received by the Economics Section called for an investigation of those general economic factors which, taken together, determine the financial success or failure of a prospective investment in improved real estate and which consequently investors are in the habit of considering before undertaking the improvement of real estate. The division was organized to 'stimulate the interest of the Nation in public and private construction' with a view to the creation of buffer employment for labor during the period of transition of manufacturing industries from war to peace production. It was feasible and proper to stimulate interest in public construction on other grounds than financial profit, but as the responsibility for providing buffer employment was a responsibility of society as a whole, it was felt that the individual investor should not be urged to build except in obedience to normal private considerations. These differ somewhat according to the type of construction contemplated, but the most important is financial profit. It was decided, therefore, that stimulation of private construction should take the form of supplying authentic data to assist the individual investor to judge for himself whether or not it would be profitable for him to build."

(Continued on Page 15.)

20-Year Barrett Specification Roof on Buildings of Union Stock Yards, Limited, Toronto, Canada. Architect: Union Stock Yards, Limited. General Contractors: Archibald & Holmes, Toronto, Canada. Roofers: The Mattiand Roofing & Supply Company, McBurnid Bros., Successors, Toronto, Canada.

## 100,000 Square Feet of Barrett Specification Roofs

The above photograph shows the mammoth new buildings of the Union Stock Yards, Ltd., Toronto, in process of construction.

This is a roofing job of more than one hundred thousand square feet, covering one continuous building, extending back beyond the sixth monitor in the picture.

Naturally, in deciding what type of roof to adopt for this enormous plant, the question of cost had to be given careful consideration.

It is significant, therefore, that a Barrett Specification Roof should have been decided on.

It means that the Union Stock Yards architects fully realize what so many architects and

builders have come to appreciate—that it *pays* to buy the *best* roof because, while the original cost may be a little higher, the *cost per year of service is lower than for any other type.*

Barrett Specification Roofs are used on more of the permanent structures in America than any other type of roof. They take the base rate of fire insurance and are

### Guaranteed for 20 Years

So sure are we of the service Barrett Specification Roofs will give under the most severe conditions, that we are prepared to *guarantee them for 20 years*, in all towns of 25,000 or over, and in smaller places where our Inspection Service is available, provided they are 50 squares or more in area. The guaranty costs you nothing. We merely require that our Specification dated May 1, 1916, shall be strictly followed and that the roofing contractor be approved by us. The guaranty is a Surety Bond issued by a well-known fidelity and guaranty company.

## We Can Save You Money on Insurance Premiums

By Assisting You in the Planning and Construction of Buildings

The construction and arrangement of buildings in proper sections, the placing of manufacturing equipment and of stock, the proper location of fire doors, and various other details insisted upon by the Underwriters' Association, can be planned before the building is erected. Thus you can be saved a considerable amount of money in reduced premiums.

Beidler & Bookmyer maintain a department of trained men for the sole purpose of assisting you in planning and erecting structures on which you can get a lower fire insurance rate.

This is Beidler & Bookmyer Service. It is our conception of service, and service to us means that your interests stand paramount.

Write or Phone.

**SHEETROCK**  
WALL BOARD*Is Easily Applied*

While Sheetrock is easily applied as other wall boards, the firm gypsum rock sheets being easily sawed and nailed, Sheetrock can be applied more quickly than other wall boards because Sheetrock boards are uniform, fewer nails are required and the joint treatment is simple.

For the walls, ceilings and partitions of new

buildings, or for alteration and repair work, Sheetrock is unequalled. Architects, contractors and carpenters recommend it.

Sheetrock Wall Board will not warp, crack or buckle and requires less paint or calcimine than other interior finishes. Saves time, money, labor and materials. Brightens the home and adds distinction.
